ALUMINUM ELECTROLYTIC CAPACITOR

I . Product Name and Type

1. Product Name ; Alminum Electrolytic Capacitor
2. Shape ; Metal case,Screw Terminals
3. Type ; CEB SERIES (85°C,2000h)

II . Outline Drawing

Screw and Mounting Bracket will not be attached with Capacitor.

III . Specifications

1. Operating Temperature Range ; - 40 ~ + 85 °C
2. Capacitance Tolerance ; - 20 ~ + 20 % (at 120Hz, 20°C)
3. $\tan\delta$ (Dissipation Factor) ; 0.15 (at 120Hz, 20°C)
4. Rated Voltage ; Table-1 V.DC
5. Surge Voltage ; Table-1 V.DC
6. Capacitance ; Table-1 μ F
7. Leakage Current ; Table-1 mA
8. Permissible Ripple Current ; Table-1 Arms (at 120Hz, 85°C)

Permissible ripple current applied is be calculated for conversion, using the figure stated below. Capacitors shall be used within 60A from restriction on M5 terminals temperature.

Ripple Current Multipling Factor

Frequency (Hz)	Temperature (°C)							
	50/60	120	300	1K	10K≤	40	60	85
0.7	1.0	1.1	1.3	1.4	1.89	1.67	1.00

ALUMINUM
ELECTROLYTIC
CAPACITOR

Hitachi AIC Inc.

9. Withstand voltage ; 1500V.AC, 1minute
 (Between terminals bundled and Bracket)
10. High temperature Loading ; Application of permissible ripple current at 50Hz to the capacitors for 2000 hours at the ambient temperture of 85 °C with a maximum voltage so that the sum of a peak of DC and AC voltages becomes equivalent of the rated voltage.
 These shall be kept for 12 to 24 hours under standard condition(comply with JIS-C-5102) and shall be satisfied with the following.
- | | |
|--------------------|--|
| Leakage Current | ; No more than initial value specified |
| Capacitance Change | ; ±15% initial value measured |
| Dissipation Factor | ; No more than 175% of initial value specified |
| Appearance | ; No notable change to be found |
11. High Temperature Storage
 (Steady State) ; After storage of 500 hours at 85°C with out voltage applied, rated volttage is applied for one hour through a 1kΩ resistor at 20°C then stabilized for 12 to 24 hours. After completion of this, electrical measurement is made. Capacitor characteristics shall be satisfied with the following.
- | | |
|--------------------|--|
| Leakage Current | ; No more than initial value specified |
| Capacitance Change | ; ±15% initial value measured |
| Dissipation Factor | ; No more than 175% of initial value specified |
| Appearance | ; No notable change to be found |
12. Surge Voltage ; The surge voltage is applied for 1000 cycles at 85 °C of 30±5 seconds at voltage through a 1kΩ series resistor for a period of 6±0.5 minutes.
 These shall be kept for 12 to 24 hours under standard condition and shall be be satisfied with the following.
- | | |
|--------------------|--|
| Leakage Current | ; No more than initial value specified |
| Capacitance Change | ; ±15% initial value measured |
| Dissipation Factor | ; No more than initial value specified |
| Appearance | ; No notable change to be found |
13. Others ; The other electrical and mechanical characteristics.
 JIS-C-5101-4 correspondingly to apply.
